DETAILED ACTION

Election/Restrictions

Applicant's election of Group I, SEQ ID NO:46, claims 1-6 in the reply filed on 5/10/04 is acknowledged. Because applicant did not distinctly and specifically point out the supposed errors in the restriction requirement, the election has been treated as an election without traverse (MPEP § 818.03(a)).

Claims 7-15 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected invention, there being no allowable generic or linking claim. Election was made **without** traverse in the reply filed on 5/10/04.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claim 4 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Art Unit: 1636

The use of "nucleotide that contains the sequence" renders the claim vague and indefinite because it is unclear how a (single) nucleotide can contain a sequence of more than one nucleotide. Amending the claim to insert "sequence" after "nucleotide" would be remedial.

Claim Rejections - 35 USC § 101

35 U.S.C. § 101 reads as follows:

"Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter or any new and useful improvement thereof, may obtain a patent therefore, subject to the conditions and requirements of this title".

Claims 1-6 are rejected under 35 U.S.C. § 101 because the claimed invention is drawn to non-statutory subject matter.

The preamble of the claims recites "A polypeptide ..." or "The polypeptide of claim ". Polypeptides that may read on natural, non-isolated polypeptides are products of nature that are not statutory subject matter because they fail to show the "hand of man" in their construction. Although the specification teaches the claimed polypeptide in the context of an artificially designed polypeptide, non-designed (natural), non-isolated polypeptides are not excluded by the claims and reasonably may exist because the sequence limitation in the claims is relatively short, and there are numerous zinc finger

Art Unit: 1636

proteins in nature, including many potential mutant and wild type proteins that have not yet been isolated.

Amending claim 1 to recite "An isolated polypeptide ..." would be remedial.

Claim Objections

Claims 1-6 are objected to because of the following informalities: the claims are drawn to encompass non-elected inventions (comprising sequences that are independent and/or distinct from the elected sequence of SEQ ID NO:46). The claims should be amended to only read on the elected invention which is drawn to SEQ ID NO:46. Appropriate correction is required.

Allowable Subject Matter

Claims 1-6 (once amended as suggested to overcome the rejections above), only as they are drawn to SEQ ID NO:46, will be allowable. The claims must be amended to remove the non-elected subject matter before the claims can actually be allowed.

The following is a statement of reasons for the indication of allowable subject matter:

A sequence and text search did not identify a zinc-finger containing protein comprising SEQ ID NO:46 in the nucleotide

Art Unit: 1636

binding region. The closest prior art is Nagase et al which teaches a gene encoding a protein which comprises SEQ ID NO:46 (AB046844). See the attached sequence comparison. However, the reference does not teach that the protein contains zinc finger(s), even though the sequence was searched for such motifs. See Table 2-2, for example.

Conclusion

No claims are allowed.
